Welcome to next-generation workflow! With its graphical approach, GlobalAction Business Process Automation creates and maintains a variety of workflow processes, from the very basic to the most complex.

Design an end-to-end visual representation of your business process that's ready for action!

1 Simply create an initiation point and add your choice of **Process Nodes** to the design palette to establish touch points for each decision or action.

2 By linking the Nodes with **Connections**, you create a path for your documents that follows your flow of business information.

3 Individual **Queues** can be created for sub-processes within your workflow, each with their own security and parameters, enforcing business rules while setting individual criterion for what a user can see or do.

Featuring a fully web-based zero footprint design surface, GlobalAction offers a true cross-platform interface that can be accessed from PC and Mac devices. In addition, with On Demand Localization, the GlobalAction interface can be instantly switched from English to any number of world languages including; Spanish, French, Portuguese, Italian, German and more. That means no matter where you are, **GlobalAction is ready and waiting**.

Top New Features in GlobalAction

Web-Based Designer

Graphical presentation of the process from start to finish makes it easy to create, troubleshoot, or revise a process. This expanded process palette provides superior visualization of the entire process, on a singular web-based canvas.

Inject GlobalForms

With the GlobalForms Node, administrators can insert a web form activity, set to email a link for users to enter required information. A PDF record of the form, including attachments, becomes part of the project documentation.

Multi-Threaded Engine

As a truly enterprise solution, GlobalAction is fully extensible and can be scaled to meet the needs of any sized organizations.

GlobalAnalytics

Dashboard views of your GlobalAction process queues, giving you instantaneous visibility into your transactional activity. GlobalAnalytics adds business intelligence to GlobalAction Workflows by providing management reports on document-driven processes.

Key Features and Benefits

Workflow Properties

Designated Workflow Properties introduce added security and process specific values to a record, while simplifying the overall database design.

Work Queue Security

New security level allows you to define which users can participate in a specific process or sub process within the workflow.

Nodes

Nodes are the individual elements that compose the user's specific workflow structure. They are dragged from the Nodes pane, onto the Design Canvas, creating the flow of information as the user intends.

Makes creating and editing processes efficient, simple and far less time consuming, translating into savings of project delivery costs.
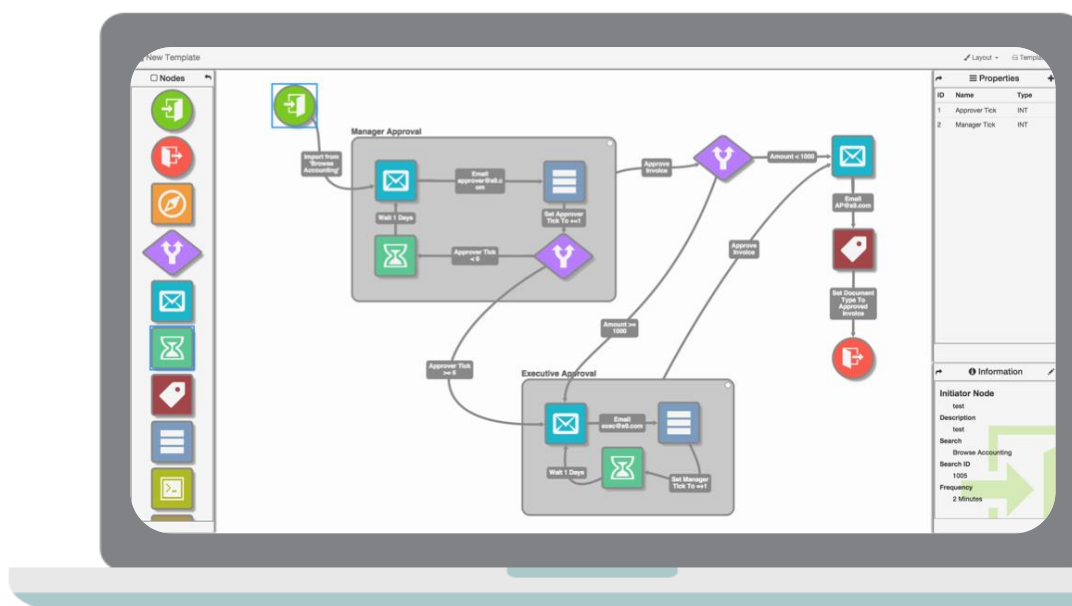

Drag & Drop Interface

Event Triggers add flexible intervals between workflow actions based on the timing of a process. A process can be set to notify a user once a day, once an hour, or once a minute. Notification can be scheduled to escalate over time.

Timed Event Triggers

Connections are the links between the different Nodes on the Design Canvas. They are represented by arrows pointing towards the direction of the workflow, with labels explaining the action between Nodes.

Process Connections

With GlobalAction, Automating Your Business Processes is a Snap!
